BetaGauge 330 for Custody Transfer Calibration

MARTEL offers a custody transfer flowmeter calibration kit for the BetaGauge 330-30. This adds a high range pressure module and LTP100A RTD probe to the standard calibrator.

The integral pump and internal sensor are used for the differential calibration portion of the flowmeter. A high pressure external sensor is used for the static portion, and, of course, the RTD provides the data for the temperature compensation calibration of the flowmeter.

In addition, it all fits in the normal carrying case for the 330.

Martel Electronics Corporation offers a diversified line of hand-held and bench calibrators, process instruments, process indicators, power supplies, meters and displays, and test and measurement instruments manufactured to the highest quality standards for the process industry and OEM applications.

In Canada, MARTEL is distributed by techniCAL Systems 2002 Inc. Contact techniCAL at www.technical-sys.com or call 1-86-MEASURE-1 (1-866-327-8731) for more information.
